St. John's International Airport Promotes Safety with a Roundabout Video

ST. JOHN'S, NL – The St. John's International Airport Authority released an instructional video today demonstrating how to properly and safely navigate the new roundabout located at the entrance of the airport.

The roundabout was opened this past October, and along with the new cellphone waiting lot, has been designed to accommodate the increased traffic and ongoing developments around the airport. Roundabouts are safer for pedestrians and motorists due to slower speeds and one-way circulation. They are efficient and result in less noise, less fuel consumption and less air pollution.

The cellphone waiting lot is the first exit out of the roundabout. The lot is available for people who are waiting to pick up passengers, as to avoid congestion near the curb during high traffic times. The lot now offers free Wi-Fi, allowing those waiting to track the progress of the incoming flight and/or stay occupied while they wait.

The video is available on the St. John's International Airport website:
